

CHATBOT → TEAM MEMBER

A white-label parts catalog. We sit down with your client, map every blocker they've got, then **assemble their system from a proven library of MCPs, connectors, and skills** — standard parts, wired to feel built for them. You bring the client. We build. You upcharge on top.

They point; we build.

STANDARD LIBRARY, CUSTOM FEEL

ONE SIT-DOWN, MANY BLOCKERS

STREAMLINED BUILD PROCESS

SMALL BUILDS, MEANINGFUL REVENUE

01

Capture

Surface the work eating their time; load their world — voice, priorities, how they decide.

02

Connect

Wire it into email, calendar, docs, CRM, Slack — reading, drafting, acting across the stack.

03

Delegate

Blockers become workflows that run on schedule or on command. They review and decide.

WHAT EACH BUILD GIVES THE CLIENT

Hours back every week

Their worst repetitive work runs itself. They approve.

Knows their business

No re-explaining themselves every day.

One brain, every tool

Their whole stack on one command surface.

Compounds over time

Every build adds a workflow that keeps paying off.

How a build actually happens

One sit-down maps the blockers. We match each to a part already in the library — an MCP, a connector, a skill we've shipped before — and wire it to the client's stack. Standard inputs, streamlined process; the output feels built for them.

Why it adds up

Each blocker is a small build (roughly \$300–500). Most clients have five, ten, more — so the small parts stack into a real system and real revenue.

The bands below are **our flat build fee to you**.
Retail is yours to set — you keep the spread and own the account. We stay invisible.

The library

Eight lanes of blockers, each with parts we can pull off the shelf. In a session we point at the ones that fit and assemble from there — not a price list to shop, a catalog we build from.

01 Inbox & Calendar

\$300–500

Google Workspace / Microsoft 365 — where "I lose an hour a day" lives.

Inbox triage agent

Kills the morning sort-and-flag. Labels mail, surfaces what needs a reply, drafts nothing until asked.

WIRES Gmail / Outlook MCP + triage workflow

Draft-my-replies

Stops the all-day rewrite of the same emails. Drafts wait in the folder — they send.

WIRES Inbox connector + voice-trained drafts

Calendar concierge

Ends scheduling back-and-forth, double-books, and cold-open meetings.

WIRES Calendar MCP: find, book, block, brief

Daily brief

Replaces "no view of what matters today" with one morning summary in chat.

WIRES Inbox + calendar + docs connectors

Follow-up catcher

Threads stop going cold — flags un-replied conversations older than X days.

WIRES Inbox connector + scan workflow

02 Outbound & cold email

\$300–500

For the client who wants pipeline but has no ops person to run it.

Cold email engine

A full system to source, write, send, and warm outbound — run from chat.

WIRES Senders / Instantly MCP

Reply manager

Replies stop piling up — sorts interested / not / later automatically.

WIRES Outbound connector + reply triage

Prospect list builder

No more bad lists or hand-scraping. Define an ICP in chat, get a verified list.

WIRES Prospecting MCP

Deliverability watchdog

Catches a domain reputation quietly tanking before the sends die.

WIRES Domain / DNS + inbox-placement checks

03 CRM & pipeline hygiene

\$350–500

The work everyone hates and nobody does.

CRM auto-logger

Deals and contacts finally get updated after calls — fed straight from meeting notes.

WIRES Airtable / HubSpot / Close / Notion MCP

Pipeline brief

Deal-health read without clicking through — plus stale-deal flags.

WIRES CRM connector + summary workflow

Pre-meeting prep

No more walking into calls cold — auto brief on who and the history.

WIRES CRM + calendar connectors

Data cleanup pass

Clears duplicate, half-empty records. They approve every change.

WIRES CRM connector + dedupe / enrich

04 Meetings → action

\$300–450

Turn talk into tracked work automatically.

Transcript-to-tasks

Action items stop dying after every call — pulled and assigned by name.

WIRES Fireflies / Fathom MCP + task connector

Meeting summarizer

Nobody has to watch the recording — clean summary posted where the team looks.

WIRES Meeting MCP → Slack / Notion / email

Recurring sync builder

Standups and L10s stop needing manual prep — agenda assembles from open items.

WIRES Meeting + task connectors

05 Docs, reports & reference

\$350–500

The monthly report that takes three tools and an hour.

Report assembler

No more copy-pasting numbers across tools every week — one report on demand.

WIRES Connectors to the source tools

Doc-answer bot

Ends "where's that in the drive?" — ask, get the answer plus the source.

WIRES Drive / Notion MCP

Template filler

Stops rebuilding the same proposal / SOW each time — filled from a brief.

WIRES Doc connector + fill workflow

Intake-to-doc

Form responses become documents automatically instead of by hand.

WIRES Form / Airtable MCP

06 Social & content ops

\$300–450

For marketing-led shops.

Draft-in-your-voice

Kills the blank page — drafts posts in the client's voice, they approve.

WIRES Voice-trained skill + publishing connector

Repurpose engine

One long piece becomes ten formats without doing it all by hand.

WIRES Content connectors

Scheduling hand-off

Stop living inside a scheduler — queue posts from chat.

WIRES Social MCP

07 Internal ops & routing

\$400–500

The unglamorous "core" work a small org has just learned to live with — often the highest-leverage fix. The "we'll scope and quote it" lane.

Matchmaker bot

Ends manual pairing of people — mentors, buddies, reviewers. (We've built this for a leadership program.)

WIRES Data connector + matching workflow

Approval queue

Makes AI output trustworthy to send — drafts queue, a human approves, then it goes.

WIRES Airtable review layer

Procurement / request handler

Takes on the multi-step form nobody wants to touch — scripted end to end.

WIRES Connectors across the systems involved

Onboarding checklist runner

New hire / client setup stops running from memory — each step actually executes.

WIRES Connectors + checklist workflow

Cross-tool sync

Data stops getting retyped between two systems — synced on command.

WIRES MCPs on both sides + sync workflow

Hours of tab-hopping, handed off.

Research brief on demand

Turns hours of searching into a cited brief in chat.

WIRES Web / search MCP

Competitor / keyword watch

Market visibility on a schedule instead of never.

WIRES SEO / SERP MCP

Enrichment pass

Fills thin contact and company records — they review.

WIRES Enrichment MCP

Three questions before we quote

- 1 Where does the work live?** Which tools — that names the blocker and the connectors.
- 2 What does "done" free up?** Hours, errors, or a person's week.
- 3 Who makes the final call?** The client reviews and decides. Always.

How you run it

- 1** Bring us a client curious about AI.
- 2** We sit down and map every blocker on their plate.
- 3** We match each to a part in the library and quote the package.
- 4** Young builders from right here assemble it under our guidance; you QA and deliver.
- 5** You upcharge and own the account.

Bring us a client. We'll map their whole plate in one sit-down, assemble the system from the library, and hand you a package you can mark up. **They point; we build.**

Built here, builds the region.

Your clients' systems are set up by young builders from right here — real
reps on the highest-leverage work in the economy, inside a real operation.

Education first.
